[Table of Contents](#)[About Me](#) 

I have my BFA in Graphic Design from Maryland Institute College of Art. The work I make is influenced deeply by my love of design objects and my passion for creating. As a designer and sculptor I find myself focusing heavily on craftsmanship and fabrication methods. Due to this focus much of my work makes use of traditional methods with the aid of new technology. Laser engraving, 3D Printing, and CNC routing are my main output for digital fabrication. Conceptually my work takes interest in interactive physical and digital design. On screen & in motion I work heavily in vector and 3D. Off screen I work primarily in wood, clay sculpting, steel, and casting with mold making.

Ballot Voting App

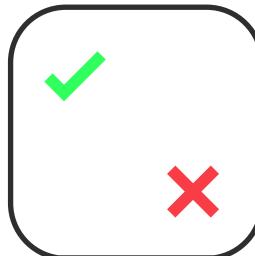

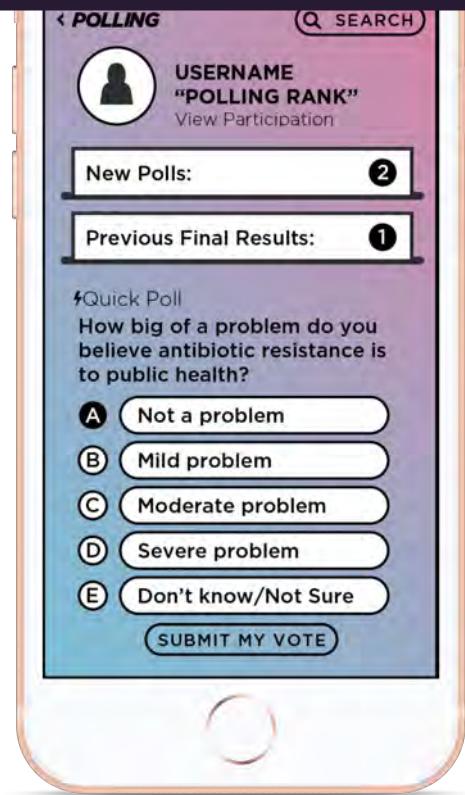

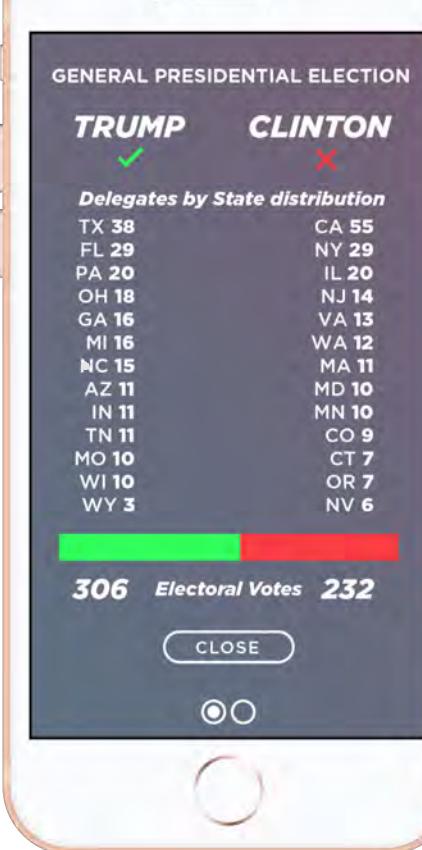

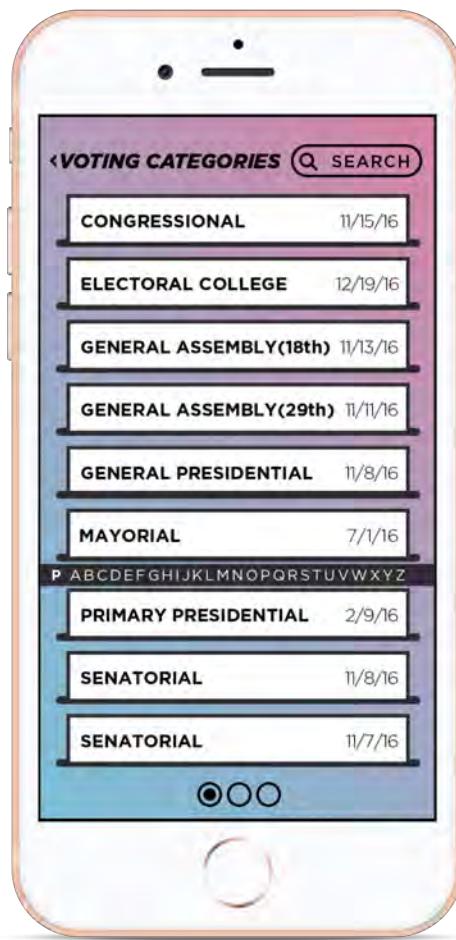

About Project

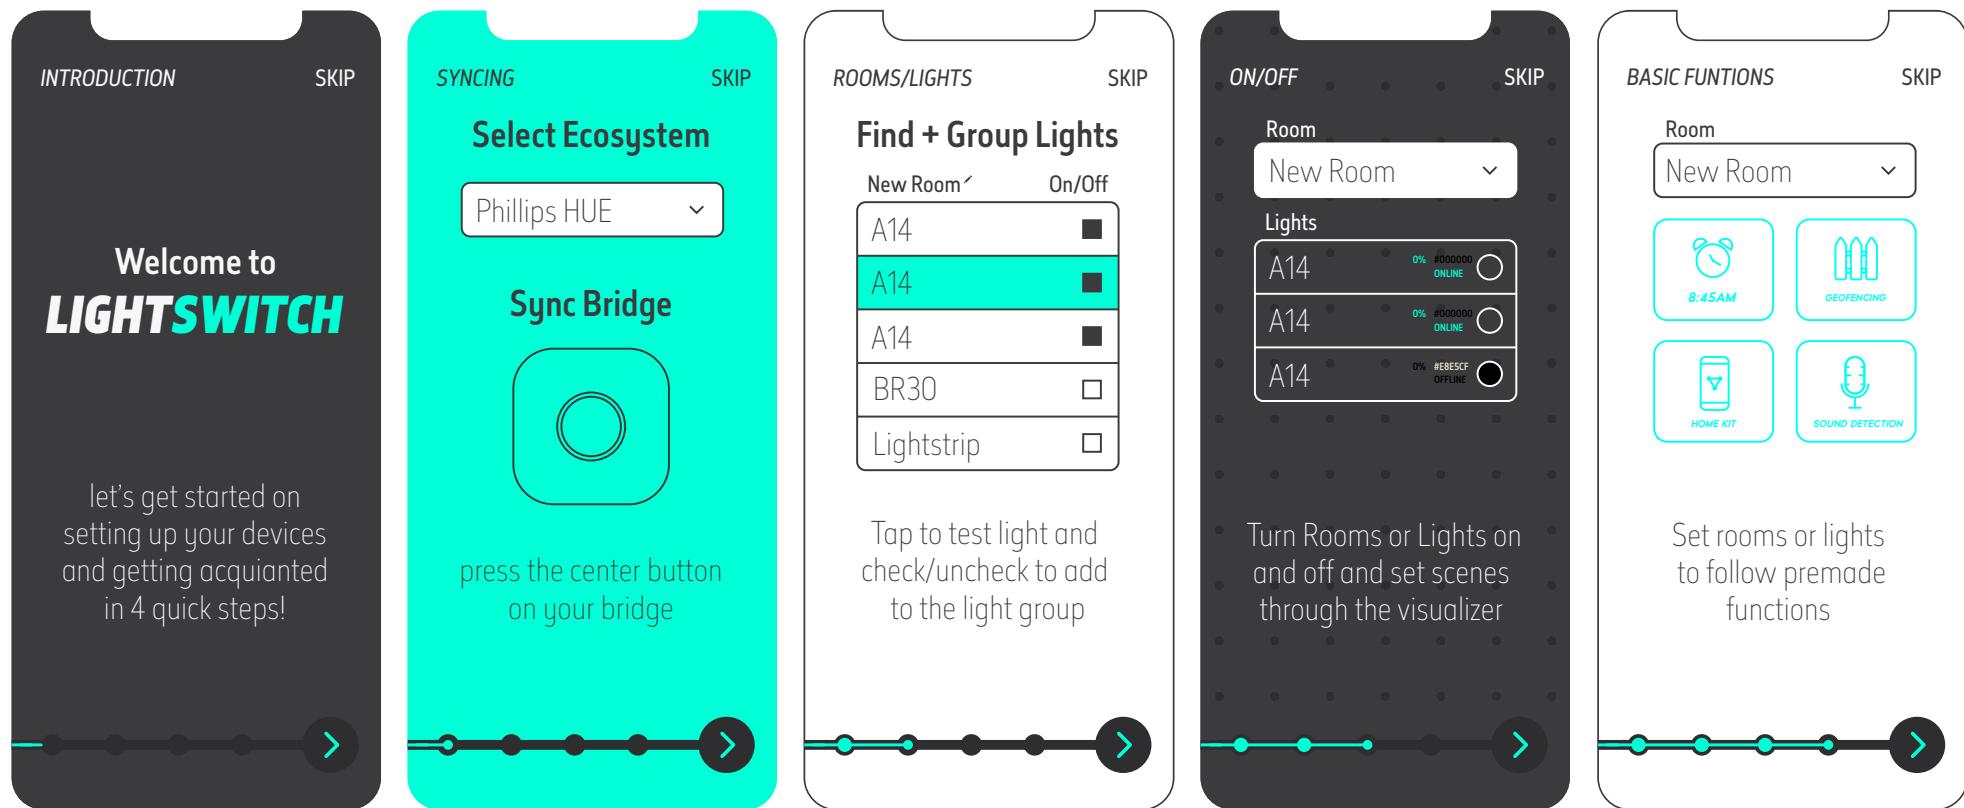

The Ballot App is a concept application created to answer the rising reliance on weak but easily accessible "Social Media News". This project envisions an interface that uses touch ID security to ensure collected polling data and social interactions are genuine. User's residence and registered party information are used to tailor voting information. The following links lead to a [concept video](#) and [Invision mock-up](#).

Let's hold our government accountable to it's voting populace with modern tech!

LightSwitch App

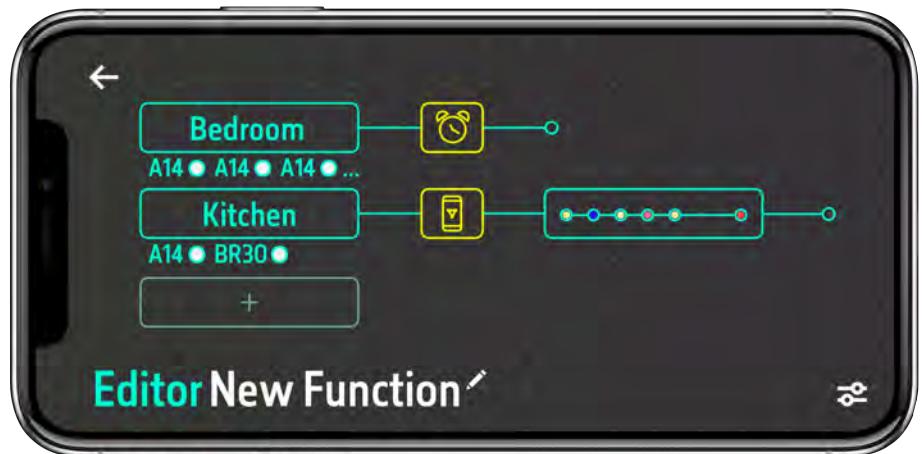

About Project

LightSwitch is an interface for the iPad and iPhone built around user friendly interaction with Smart-Home light devices. Taking cues from existing apps that pair with a bridge which connects to smart bulbs and user input controlled apps like Garage Band, I've mocked up a system living across devices that facilitates quick control of a Smart-Home ecosystem that can get very in depth with its customization and staging. Motion sample viewable [here](#).

▲ Default Convention Branding

About Project

Default is a covention geared towards those into game fandom, generated for a GD3 prompt. Alongside a traditional large print directory the envisioned convention relies upon a companion app that allows for forum discussion based events as well as shedding and location information for panels and activities. Icons and key colors are influenced by colors related to console branding.

Default Convention Companion App

About Project

The Default companion app exists outside of the context of a digital directory, convention participants are awarded reputation for interacting via the app forum or when attending a panel. In designing an inclusive app with convention information readily available the wireframe selection displayed shows the app landing screen, an open forum, and the venue map.

▲ Elephant Toy Group Project with Smithsonian National Zoo 1/2

[About Project](#)

Working as a member of a 12 student class consisting of graphic design and sculpture majors working with digital tools in order to work with the Smithsonian to create toys safe for the enrichment of rescued Asian Elephants. The design our class settled on is a “weeble-wobble” toy that self rights when knocked over. *Continued..*

▲ Counter Culture 3D printed Counter

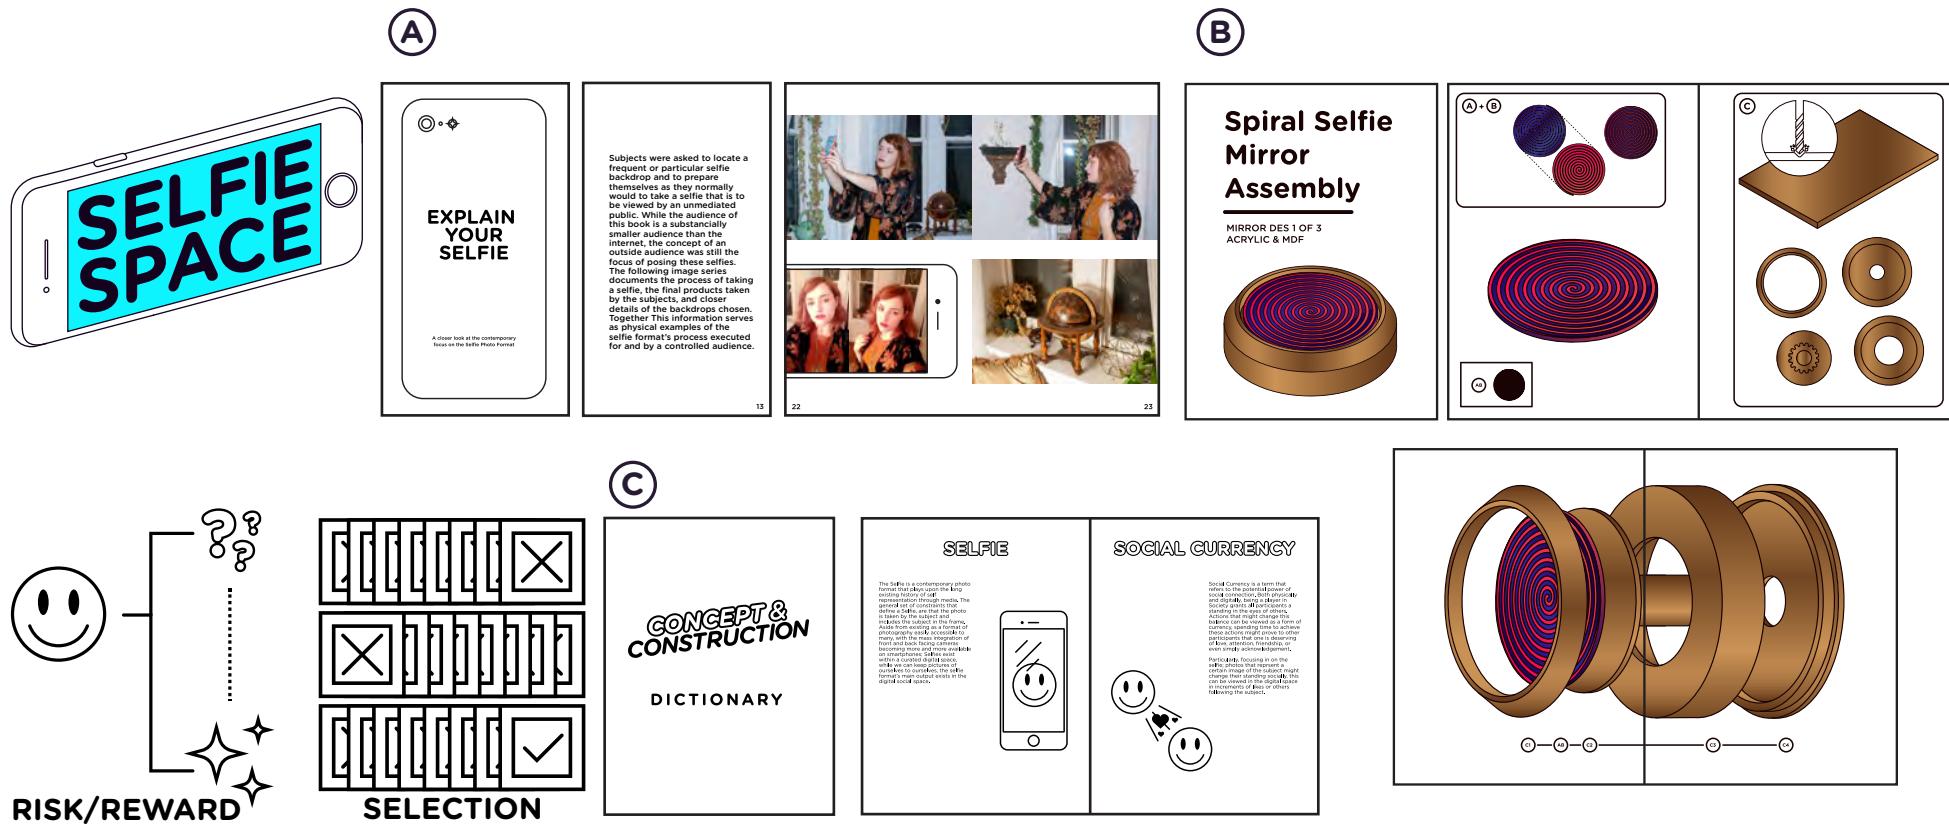

About Project

Counter Culture is a participatory activity designed for a group that utilizes an enlarged analogue 3D printed counter to facilitate a “game.” Participants are sat in a circle and each given a card containing a morally charged question, the counter is passed around the circle. When a participant holds the counter, they ask their question, internalizing their own response. Group members in the circle nod or shake their head in order to silently respond to the question and are allowed to clap once if they wish to abstain. The counter is progressed once for each disagreement and then reset by the next participant in the circle so that the process can start anew. This process allowed participants to visualize their perspective in relation to the group, as well as experience how the group perspective affected their own decision making.

▲ Selfie Space 2017 Thesis Installation 1/2

This project was self driven following the stages of conceiving, planning, budgeting, and exhibiting to generate a thesis which demonstrates how I practice design. My main challenge was time management for generating my self produced design objects, aside from the installation branding I also worked arduously to create a uniform identity for my objects. My initial vision for the space included two kinetic mirror types which I ended up needing to cut and make static instead, to conform better to my project timeline. Still, I was able to include one of the three initial designs in the Hexagonal Led backlit two way mirror. Each mirror was designed in 3D and the rhino model was then used generate tool paths to CNC route mdf into the mirror frame shape and to laser engrave mirrored acrylic into the mirror face. *Continued...*

Selfie Space 2017 Thesis Installation 2/2

About Project

After the MDF plugs were finished I went about making molds for each frame and mirror back in order to cast two of each resulting in a total of six mirrors. Ultimately my final exhibition didn't contain every element I had initially planned on, but I was still excited to see my space come together and be interacted with; both physically and in digital archiving—where participants really did frame themselves in the mirrors, in front of the backdrop, or just within the space; and place their own digital persona within the locale in order to generate a unique personal selfie photo which in many cases was uploaded without any major prompting from the exhibition or myself.

Handy Craft Branding

About Project

Handy Craft is a branding project generated around a GD4 Prompt focused on the generation of a self produced company that is both innovative and geared towards a modern audience. Handy Craft is a future facing furniture firm that integrates technology into traditional furniture making methods. As such the pallet, logo, and physical items feature computer space colors, patterns and textures that reference natural form in digital styling, and products that make use of non-traditional construction and features.

NIGHT LIGHT

The Night Light is a trusty end table light, its capacitive sensor allows lamp activation by touching any wood portion of the lamp. A solid hard maple construction has channels milled in order to accommodate poured urethan resin, that will glow vibrantly when exposed to the interior placed led bulbs. Plugs into standard US NEMA Connector for power.

**MATERIAL INDEX**

Follow care to best of ability, some finishes can extend the life of a furniture piece so long as it is maintained.

As materials are hand picked for their specific properties, all furniture pieces should be handled with suggested care depending on their material composition. You wouldn't want to buy an icecream cake and see it go melting.

Material No.	Classification	Sourcing	Care
No.0001	Yellow Poplar Straight uniform grain, yellowish brown/cream heartwood color	Eastern USA	Poplar is decently rot and insect resistant, keep wood in cold-moderate temperature. Remove dust with wet cloth
No.0002	Black Walnut Straight grain, pale brown/chocolate color	Eastern USA	Very Rot Resistant, susceptible to some insect attack. Clean with microfiber cloth
No.0003	Hard Maple fine grain white/cream sapwood	North Eastern USA	Avoid moisture, clean with cloth
No.0004	Hot Rolled Steel	Minneapolis, MN	Polish with cloth, keep dry.
No.0005	Stainless Steel	Minneapolis, MN	Buff nicks with scouring pad.
No.0006	Light Emitting Diode (LED)	Minneapolis, MN	Keep dry, electrical
No.0007	Urethane Resin, UV reactive pigment	Edison, NJ	Avoid scratching, clean with moist sponge
No.0008	Neodymium Magnet	Minneapolis, MN	contact distributor if dislodged for repair

Willowwood & Co Branding

About Project

Client Willowood & Co is a New Jersey based naturally sourced skin care company that was seeking a logotype to represent their brand, as well as label designs for their launch line. The finished logotype is a custom vector bezier path from a handlettered lockup chosen from multiple iterations. In working closely with the ingredients of the two products in the initial line, the front labels and lid labels contain embeleshments and leaf ornaments displaying the main scents featured in the scrub and body whip.

▲ Post Branding 1/2

About Project

Under design mentor Mel Barat of GAP we were given a luxury brand to mold into our own called, "Post." My version of Post is both post modern and accessible, producing luxury wear that is just as easy to wear as it is to look at. After solidifying the brand identity I produced a logo, hang tag, and two interior labels for a top and bottom garment. Informed by post modern patterns and light and accessible vernacular, interior tags contain care information sizing and brand styling.

Beersheba Postcard Selection

About Project

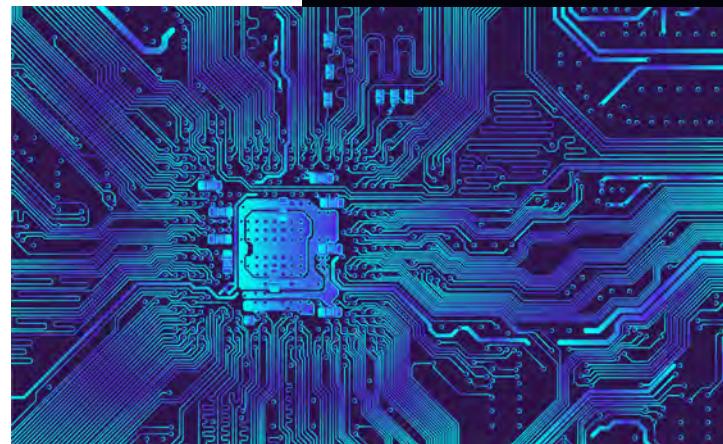

In response to Iltalo Calvino's novel, *Invisible Cities* a reading assigned for Advanced Design class, I generated a set of vector illustrated post cards, representative of a city called Beersheba, described within the book. Postcards are branded with a logotype and city theme.

Print

▲ Vector Illustration Selection

About Project

A large amount of my illustrative work is accomplished through the means of precise and detailed bezier paths. While the resulting work is quite detailed, it is visually readable at different scales and in limited colorways.
